

Drainage solutions for wastewater and rainwater

Pentair Jung Pumpen and Fairbanks Nijhuis present new products at IFAT

Jung Pumpen will be exhibiting in Munich (30 May - 3 June 2022) together with its Dutch sister company Pentair Fairbanks Nijhuis. On display will be new drainage solutions for the disposal of wastewater containing wet wipes, for flood management and for pressure drainage.

Live demonstration of the new MultiCut cutting system

With 200,000 cuts per minute, wet wipes in wastewater are no problem for the new MultiCut cutting system. How effectively the wastewater pump with the new system works, will be demonstrated live on the booth. Interested visitors can also check out the pump's ease of maintenance and change the cutting wheel as well as adjust the cutting gap.

Surface drainage and pressure drainage

The new SKS 1000 plastic sump with MultiDrain UV 600 pumps will be exhibited. This is ideally suited for the drainage of large, compacted areas where water cannot seep away during heavy rainfall. Equipped with different wastewater pumps, any wastewater or surface water is safely conveyed to the nearest sewer.

Also on display are the large and small PKS wastewater sumps. Depending on the installation conditions, the PKS 1200 -3000 can be adapted in height and diameter to convey wastewater from industrial and municipal areas. The small PKS-B 800 sumps are used as a complete pumping station for pumps with cutting system in pressure drainage systems. They will be shown with the replacement sets, which are the ideal way to upgrade "aging sumps".

Sound Pumps to win

The Sound Pump is a powerful Bluetooth speaker in the shape of a pump. It can be connected to a smartphone and provides a musical sound system for the construction site or the office. 20 of these very special pumps are being raffled off.
